**Designed by master luthier Bill Conklin.**

**Prototyped in the world-famous Conklin Custom Shop.**

**Manufactured to our strict quality and construction standards.**

The simple, elegant, comfortable curves; outstanding craftsmanship and playability and incredible value of the new **"Groove Tools" guitar by Conklin** make it one of the most sought after "7" strings.

**Conklin** necks are laminated for superior strength and stability.

We use a tilt-back headstock to improve tension over the nut for better sustain. Truss rod adjustments can be done quickly at the headstock and you can find your way around the neck with ease due to our exclusive "off-sides" dots which can be viewed from the top or the side of the fingerboard.

The **Groove Tool** 7-string guitar features a solid cherry body; arched front and back, our exclusive contoured neckheel, 5 pc. maple/purpleheart neck, with 24 fret Rosewood fingerboard and locking input jack.

**GTG-7T**

The **GTG-7T** features a non-locking tremolo with Sperzel locking tuners for total tuning control and easy string changes. Custom humbucking pickups run through a 3-way selector switch and a push/pull tone knob and coil tap switch.

**GTG-7**

The **GTG-7** features a fixed bridge and strings through the body. Also features the same electronics as the **GTG-7T** above.

Now you can

**"Get in the Groove..."**
